

Things to do during the October Active weekend

Check the propane level by lifting the blue cover on the tank and reading the gauge.

Treat the septic system with Rid-X or equivalent as per instructions on the package for a 1,500 gallon system.

Check all fire extinguishers.

Clean out main fire pit.

Because of the recent rain we need to work out some of the tire ruts around the whole site.

Still need to thin out (spread) the river rock on the road going into the compound area. Just rack it towards the compound area.

Need to move one water line back about 3ft so we can remove another tree where the river rock is so a big truck can get down the road

Need to cut down lots of small trees where the new septic system and lateral lines are going in the compound area

Need someone to measure the bunk house so we can purchase plywood for the floor

Need 2 pick-up trucks to load up the aluminum cans and take to Rockdale. (this place will close at 1pm on Sat and not open on Sun)
